Education

University of Pittsburgh December 2025
Bachelor of Science - Computer Science *GPA: 3.68/4.0*

Relevant Courses
Database Management Systems, Software Quality Assurance, Software Engineering, Artificial Intelligence, Programming Languages for Web Applications, Data Structures & Algorithms, Linear Algebra

Experience

Software Engineer Intern June 2025 – August 2025
BNY *Lake Mary, FL*

- Constructed a network of RAG AI agents, coordinating agent communication with Python to classify legal documents and extract investor and trade data with 90% accuracy, lowering document review time and boosting operational efficiency by 40%.
- Designed a RESTful API with Spring Boot to integrate the AI system into an internal Angular-based application, enabling real-time delivery of structured JSON data and improving access to key insights for 30+ internal users.
- Built an automated fund name–matching function using Levenshtein distance to map AI-extracted fund names to fund IDs in a 10,000+ row Excel dataset, eliminating manual lookups and reducing processing time by over 50%.

Web Application Developer Intern June 2024 – August 2024
Advantexe Learning Solutions *Conshohocken, PA*

- Engineered key components of business acumen simulations, including interactive dashboards and decision-making workflows, contributing to simulation design and delivering React and Bootstrap interfaces that enhanced participant engagement and learning outcomes.
- Researched and recommended the optimal charting API for simulations, cutting implementation time by 30% and improving dashboard performance, enabling participants to access actionable insights for informed decisions.
- Validated and fine-tuned 10+ existing business acumen simulations through black box testing, ensuring accuracy and reliability to provide participants with a consistent, high-quality learning experience.

Web Application Developer Intern June 2023 – August 2023
Advantexe Learning Solutions *Conshohocken, PA*

- Implemented interactive business acumen simulations as part of a cross-functional team, using React and Bootstrap to convert static wireframes into responsive, high-fidelity interfaces deployed in production.
- Transformed backend customer data into clear, client-facing visual formats, improving data accessibility and supporting informed stakeholder reviews.

Projects

JakeTube | *TypeScript, Next.js, Express.js, Docker, Firebase, Google Cloud*

- Created a responsive YouTube clone app supporting user uploading and viewing using TypeScript and Next.js.
- Built backend services with Express.js, Firebase, and Google Cloud, supporting up to 10 GB of storage.
- Utilized Firebase Auth for secure user authentication, allowing up to 50,000 document reads per day.

Reel Hot Takes | *TypeScript, React, TailwindCSS, FastAPI, MongoDB, BeautifulSoup*

- Developed a Python-based API with FastAPI and BeautifulSoup to scrape over 8000 movies from The Movie Database and gather Letterboxd user scores.
- Leveraged TailwindCSS to streamline UI development and optimize frontend performance, incorporating user-friendly dark mode functionality.

Skills

Languages: Python, Java, JavaScript/TypeScript, HTML/CSS

Frameworks: React, Angular, NextJS, NodeJS, ExpressJS, Tailwind CSS, Spring Boot, FastAPI

Tools/Technologies: APIs, Docker, MongoDB, Git/GitHub, Linux, Google Cloud, Firebase
